

For Immediate Release

## Reedy 1600 Series Receiver & Micro Packs

Reedy's 1600 Series Receiver and Micro Battery Packs feature high capacity for extended run times while producing maximum power for the latest high performance motors and servos. High output cells, low resistance welded connections, and quality silicone insulated wires prove reliable in even the most adverse conditions.

1600 Series receiver packs come in a choice of two 6.0 volt configurations to suit most cars and are equipped with a universal receiver plug. High capacity means servo and radio power remain strong even in hour long main events.

1600 Series micro packs are also available in two configurations with micro connectors for installation in a wide variety of vehicles. With 7.2 volts on hand, high speeds and wicked torque propel your 1/18 scale vehicle to speeds that would make 1/10 scale cars jealous!

Enthusiasts of all skill levels will appreciate the combination of performance, quality, value, and reliability that Reedy's 1600 series micro and receiver battery packs bring to the track.
