

For Immediate Release
March 25, 2007

Reedy VMX Concept R-46 IB4600 Euro Spec

New competition rules for EFRA and other sanctioned events in Europe require cells with a shorter length specification (43mm) than standard IB4600 cells. This required the development of an entirely new cell casing to comply with the new regulations.

The new EU Spec IB4600, treated and matched using the Reedy VMX Concept, produces a racing pack capable of powering winners at all levels of competition while sharing the increased durability and reliability of the standard IB4600.

The Reedy VMX Concept makes these great cells even better. The process begins by applying an intense energy pulse to new IB4600 EU Spec NiMH cells using high-tech equipment designed in house by our engineering staff. The end results of this exclusive process are reduced internal resistance, increased voltage output, and more POWER!

These enhanced cells are cycled then power-matched using a 35-amp discharge. This process eliminates weak cells and those that do not fall within the exclusive percentage that are good enough to be hand selected as Reedy VMX R-46 grade.

Reedy VMX cells are packaged conveniently in a compact plastic clamshell that provides a full view of each cell's test data, and doubles as a handy storage device after the pack has been assembled.

Competition environments require the highest level of performance. Reedy VMX Concept matched cells meet and exceed this demand.

UPC: 84695 00677	#677	Reedy VMX R-46 IB4600 6-Cell EU Spec	\$124.99	Available: Apr '08
UPC: 84695 00678	#678	Reedy VMX R-46 IB4600 5-Cell EU Spec	\$104.99	Available: Apr '08
