

New Product. For Immediate Release: November 17, 2009

New Factory Team Blue Aluminum Screw Sets!

Factory Team Blue Aluminum Screw Kits reduce weight for better acceleration and handling, while the blue anodizing adds high-tech bling. Even cars already at the minimum weight can benefit. A lightweight car allows ballast to be placed in the optimum position for different track conditions and equal left-to-right weight distribution.

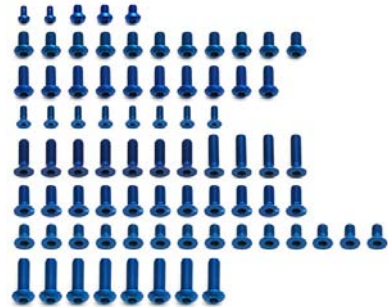

Available for Team Associated 12R5/12R5.1, 10R5, and 10R5 Oval, these complete sets of 65, 66, and 78 screws replace the heavy stock steel screws and can be fitted to any vehicle that uses metric hardware.
